Photoshop allows you to work with three main types of media: Raster Imaging, Vector Graphics and Animations. This chapter describes how you can use each type of media in Photoshop. Learn How To Edit Raster Images Raster images are the most common type of media used in Photoshop because most documents are composed of a series of pixel images, or raster images. Raster images are created from the information on a computer display and can be any of the following: Monochrome. One of three colors is recorded on a pixel. Only black, white and shades of gray are allowed in Photoshop. Color. Each pixel is labeled by a particular set of colors. The same set of colors can be used to create different images, as can different sets of colors. Each pixel is labeled by a particular set of colors. Digital photographs. These can be imported as JPEGs, TIFF files or Photoshop's own PSD file format. Using Photoshop's Layers To prepare an image for editing, create a new Photoshop document. The Tools Options dialog box will now open. In the General section, check to make sure you have selected Camera Raw mode. section, check to make sure you have selected Camera Raw mode. The Layers tab is the interface you will use to define the editing you want to do to a layer or layers. Creating a New Layer Open an image by either dragging it into Photoshop or double-clicking the image in the Finder. If you drag a picture file, Photoshop will open the picture in a new layer. (If the image contains layers, you will see the number of layers in the Layer palette on the Layers tab. If the image has no layers, you will see a plus sign in the Layer palette.) If Photoshop opens the image for you, the original image is in the document window. The new layer is selected with the magic wand tool. If you double-click the image in the Finder, Photoshop will open the image in a new document. Regardless of how you open the image, Photoshop will always open your image with a new active layer.
